# Challenge:
# Complex and inefficient IT infrastructures

Many companies are faced with the problem that their IT infrastructure is outdated or does not keep up with their
This leads to inefficient processes, security risks and increased costs. In addition, companies are increasingly under pressure to implement environmentally friendly and sustainable solutions.

## Typical challenges in IT:

- **Outdated hardware:**Old servers and networks that are no longer compatible with modern standards.
- **Security risks:**
  Lack of
  Security protocols and inadequate protection against cyber attacks.
- **Scalability:**
  Difficulties in connecting the
  IT infrastructure with the
  to scale the company's growth.

- **Sustainability:**The
  Need to reduce $CO_2$ emissions and implement energy efficient solutions.

### ITP Solutions: Our Services

ITP Solutions offers a comprehensive portfolio of IT services tailored to the specific needs of modern businesses:

1. **Managed IT Services:**Let us manage your IT infrastructure. Our managed services provide all-round support, maintenance and security so you can concentrate on your core business. We offer:

- Proactive system monitoring IT
- maintenance and support
- Security management

2. **vServer and cloud services:**With our flexible vServer solutions, we offer a powerful, cost-effective and scalable cloud infrastructure that can be easily adapted to your business requirements. Advantages:

- High availability and flexibility Cost-
- efficient infrastructure High data
- security

3. **Colocation services:**Use our data centers to house your own servers safely and cost-effectively. Our locations offer the highest security standards, modern cooling systems and a reliable power supply.

4. **Network and security solutions:**We ensure that your networks are efficient and secure. With our DDoS
Protection solutions and network management services
ensure reliable and fast data transmission.

ITP Solutions leverages cutting-edge technologies to provide businesses with customized solutions. Our services are designed to maximize operational efficiency and reduce IT costs.

**1. Managed IT Services**

Our managed IT services enable companies to place their entire IT infrastructure in trustworthy hands. This means for you:

- **IT Management:**We take care of the continuous monitoring, maintenance and management of your IT systems to ensure that they always run smoothly. This saves you internal resources and allows you to concentrate fully on your core business.

- **Security and updates:**Our services include regular security updates and compliance with the latest IT security standards. This protects your systems from cyber threats and ensures stability. **Scalability:**As your company grows, your IT grows with it. Our solutions adapt
- flexibly to your needs, whether it involves additional server capacity, higher security requirements or more users.

**2. Cloud solutions**

Today, the cloud is the basis for flexible, secure and cost-efficient IT infrastructures. With our customized cloud solutions, you get:

- **Scalable resources:**Use exactly the IT resources you need and adapt them flexibly without having to invest in expensive hardware. Our cloud services offer you maximum flexibility in

  simultaneous cost control. **Secure data**
- **processing:**Your data is stored in our highly secure, climate-neutral data centers. These have strict access controls, state-of-the-art encryption technologies and

  ensure maximum data security. **Efficiency and**
- **collaboration:**Using the cloud enables your teams to
  to work independently of location, share documents in real time and manage joint projects efficiently.

## TECHNICAL FEATURES:

**Security:**

Security: Our solutions include comprehensive
Security protocols that ensure your data is protected at all times.

**Scalability:**

Whether small start-ups or large companies – our solutions grow with your requirements.

**Sustainability:**

By using
By using energy-efficient technologies and climate-neutral data centers, we contribute to reducing our ecological footprint.

### 3. vServer – flexibility and efficiency

Our virtual servers (vServers) offer you the benefits of dedicated servers without the costs and maintenance of physical servers:

- **Easy administration:**You get full control over your vServer and can conveniently manage it via our user-friendly administration dashboard. Simple configuration and management of your server resources, such as storage space, computing power and network connections, are at your disposal. **Cost savings:**With our vServers, you reduce the investment costs for
- expensive hardware and only pay for the resources used. This makes our solution not only flexible, but also economical.

- **Scalable performance:**Depending on your needs, you can flexibly adjust the computing power of your vServer. This flexibility is particularly suitable for companies that work with fluctuating loads or need to scale quickly.

### 4. Security solutions

IT security is the basis of every modern infrastructure. We offer:

- **Network protection:**Our DDoS protection solutions provide a reliable defense against network attacks. We protect your servers and applications from overload attacks to ensure maximum uptime.

- **Backup and recovery solutions:** Automated, secure backups and fast recovery options ensure that your data is always protected and can be quickly restored if needed. **Compliance:**Our service helps you comply with industry-specific and legal
- security requirements (such as GDPR or ISO certifications) and protects your sensitive data from unauthorized access.

## OUR LABELS

**Misterhost:**

Misterhost offers flexible, scalable and secure cloud services for companies of all sizes. The user-friendly management of the cloud infrastructure enables customers to optimally tailor their IT environments to their needs. At the same time, modern
Security solutions and a climate-friendly infrastructure for reliable and sustainable operations.

**24h hosting:**

With 24h hosting, companies receive highly available hosting solutions around the clock. The service offers customized IT solutions for server hosting, cloud services and managed services. Security,

Reliability and constant availability are paramount to ensure IT operations without downtime
ensure.

**Enormous Green Center:**

The Enormate Green Center stands for sustainable IT solutions and the operation of climate-neutral data centers. With a clear focus on
The Enormate Green Center offers innovative technologies for energy efficiency and environmental protection to support companies with sustainable, secure and high-performance IT infrastructures. The data center aims to be completely climate neutral by 2030.

**5. Co-location**

Our colocation services offer you a secure and cost-efficient place for your servers in one of our climate-neutral data centers:

- **High security:**Your servers are located in a secure, 24/7 monitored data center with access controls, video surveillance and state-of-the-art security systems.

- **Redundant infrastructure:**Our data center is equipped with multiple redundant power and network connections to ensure maximum availability.

- **Cost efficiency:**Instead of investing in your own data center infrastructure, you benefit from our established solutions without sacrificing security and performance.

## WHY YOU SHOULD USE OUR DATA CENTERS

### BENEFITS AT A GLANCE:

**Security and data protection:**

- Highest security standards in our data centers.

**Scalability and flexibility:**

- Optimized IT infrastructures that grow with your business.

**Sustainability:**

- Our climate-neutral Data centers reduce $CO_2$ emissions and help companies achieve their sustainability goals.

Our climate-neutral data centers offer you the ideal environment for your IT systems:

- **Climate neutrality:**We rely on sustainable, climate-friendly technologies and will achieve full climate neutrality by 2030.
  We actively contribute to climate protection through energy-efficient systems and environmentally friendly cooling technologies.

- **Reliability:**Our data centers offer the highest reliability and availability thanks to redundant power supplies, state-of-the-art network architectures and comprehensive protection against physical and cyber-related failures.

- **Innovative technologies:**We rely on the latest technologies in the areas of virtualization, network security and cloud computing to offer you a future-proof IT infrastructure.

**Why choose ITP Solutions?**

ITP Solutions offers a unique combination of IT expertise, sustainability and innovation. Our climate-neutral data centers, flexible cloud services and highly secure managed services offer companies the opportunity to make their IT more efficient and sustainable.
